PROFESSIONAL SUMMARY

Agentic AI and Automation Engineer who ships production LLM agent systems for high-volume customer operations. Built a multilingual Arabic/English AI sales agent across WhatsApp, Instagram, and Messenger that resolves most lead conversations end to end without a human and cut median reply time from **8.2 hours to 41 seconds**. Depth in RAG, confidence-gated guardrails, human-in-the-loop escalation, structured-output automation, and conversation-intelligence pipelines that turn raw chats into demand signal. Core stack: Python, OpenAI, LangChain, Pinecone, n8n, Odoo, FastAPI, AWS.

SKILLS

Agentic AI & LLM Systems: OpenAI API (Responses API, function and tool calling, Structured Outputs, vision, speech-to-text), Claude API, agent orchestration, agent memory and state management, RAG, LangChain, human-in-the-loop design, guardrails and confidence-gated responses, LLM-as-judge evaluation, golden-set test suites, cross-encoder reranking (bge-reranker-v2-m3), prompt engineering, Arabic NLP

Automation & Integration: n8n (workflow orchestration, webhooks, error handling and retries), Odoo 18 (Python ORM, custom modules, controllers, ir.cron, OWL), WhatsApp Business Cloud API, Meta Graph API and Conversions API, Instagram Messaging API, REST APIs, OAuth2 and webhook auth

Data & Vector: Pinecone (serverless), text-embedding-3-large, embeddings and semantic search, PostgreSQL, MongoDB, SQLite

Languages: Python (asyncio), JavaScript / TypeScript, SQL, Dart, C++, Bash / PowerShell

Full-Stack & Mobile: FastAPI, Django / DRF, Node.js / Express, React 19, Vite, Flutter, Firebase, JWT

Cloud & DevOps: AWS (App Runner, ECR, S3, EC2 / Lightsail), Docker, boto3, CI and regression testing for LLM pipelines, Git, Linux

EXPERIENCE

Agentic AI & Automation Engineer, Full-Stack Developer

Nov 2025 – Present

Ocean Gate Logistics Solutions

Dubai, UAE

- Shipped a multilingual Arabic/English AI sales agent across WhatsApp, Instagram, and Messenger that handled **21,000+ leads** with **74,865 AI replies**, resolving roughly **69%** of conversations end to end with only **31%** ever escalated to a human; the agent reads voice notes and product photos, answers from the knowledge base only when confident, and hands off anything uncertain to a rep. (FastAPI on AWS App Runner, OpenAI, Pinecone RAG, n8n, Odoo 18.)
- Cut median first-reply time from **8.2 hours to 41 seconds** and absorbed the **51%** of messages arriving outside working hours (evenings, nights, weekends): 24/7 coverage with zero added headcount. (n8n, Odoo 18.)
- Reached **95.1%** correct routing on a 47-case Arabic test suite by adding confidence checks that send low-certainty or sensitive-cargo questions to a human instead of letting the agent guess. (Pinecone reranking, OpenAI.)
- Automated lead qualification end to end: the agent reads the full conversation to infer what each customer wants to ship and how ready they are, scores buying intent, marks qualified leads **Waiting** and the most ready as **Hot** so reps take the hottest buyers first, and moves each lead through CRM stages (Qualified, Review, Lost) on its own to keep every pipeline accurate. (OpenAI Structured Outputs, Odoo 18 CRM.)

- Surfaced **2,200+** ready-to-buy leads and lifted the sales team's follow-up rate on qualified leads by **40%** with a conversation-intelligence pipeline over **200,000+** historical messages: monthly buying-intent scoring, win and loss reason mining, rep response and follow-up benchmarks, and automated alerts on high-intent leads going cold. (Python, OpenAI Structured Outputs, FastAPI, PostgreSQL.)
- Built a marketing-intelligence layer that turns raw conversations into demand signal, mapping top products and shipping lanes, peak lead-activity windows, and channel and campaign attribution for won, lost, and qualified leads to sharpen targeting and timing; improved the qualified-lead rate from marketing campaigns by **30%**. (OpenAI, Odoo CRM, PostgreSQL.)
- Gave managers full-funnel control with a **19-module** custom Odoo 18 sales CRM: dashboards tracking **20+ KPIs** against manager-set targets (leads by stage, overdue leads, response times, calls, revenue, AI time saved), plus a real-time omnichannel inbox uniting WhatsApp, Instagram, and Messenger with lead assignment, notes, per-chat AI toggle, weighted round-robin routing, click-to-call softphone, and server-side Meta Conversions API. (Odoo 18 Enterprise, Python, OWL, PostgreSQL.)
- Core full-stack contributor on Logestechs, the company's logistics platform processing **160,000+ shipments**, **110,000+ customers**, and **90,000+ COD** collections; owned shipment, warehouse fulfillment, COD and accounting, and user-management flows across **7 user roles**, from order intake to driver dispatch, proof of delivery, and settlement. (Django/DRF, React 19, Flutter, PostgreSQL.)

AI Marketing Automation Engineer

Sep 2024 – Sep 2025

WaslWeb AI Agency

Dubai, UAE

- Built autonomous B2B prospecting agents that researched accounts and wrote personalized outreach, reaching **1,000+ leads**. (LangChain, RAG, Pinecone.)
- Deployed WhatsApp and social-media booking chatbots for clinics and small businesses, driving **45% more appointments** and **18% fewer no-shows** through automated qualification and reminders. (LangChain, n8n.)
- Ran an AI marketing stack (chatbots, CRM, lead scoring) that auto-handled **350+** Google reviews to a **4.9-star** average, reached **30%** email reply rates, and cut response times by **60%**.

Infrastructure Service Delivery Engineer

Jul 2024 – Sep 2024

du (Emirates Integrated Telecommunications)

Dubai, UAE

- Improved RF call-handling efficiency by **15%** through antenna capacity testing, and cut fiber-installation turnaround by **10%** through OSP process improvements and OLT/GPON lab testing.

Full-Stack Web Developer

May 2024 – Jul 2024

Sharjah Media Bureau

Sharjah, UAE

- Grew user engagement by **20%** with a React and Firebase digital magazine, and improved attendance tracking by **30%** by leading a Flutter geolocation attendance app.

PROJECTS

NeuroFlex: IoT-Enabled Rehabilitation Glove

Final-Year Project

github.com/AhmedSoubhi/Neuroflex

- Built a smart rehab glove capturing **13 sensor channels** of hand movement on an ESP32, streaming readings live to the cloud and driving motor-assisted finger exercises that respond in **under a second**, with therapist-adjustable speed and reps. (C++ / Arduino, ESP32, Firebase Realtime Database.)
- Enabled remote at-home therapy with a therapist web portal: live sensor dashboards, patient profiles and search, and built-in therapist-patient chat. (React, Firebase Auth and Realtime Database.)

EDUCATION

Bachelor of Science in Computer Engineering

2024

Ajman University

Ajman, UAE

LANGUAGES

Arabic (native), English (fluent)
