Professional Summary

AI Transformation & Solutions Engineer with hands-on experience analyzing business and operational processes, identifying inefficiencies and bottlenecks, and translating business challenges into practical, scalable technology solutions using artificial intelligence, automation, data, and software development.

Experienced in collaborating with cross-functional teams, understanding business requirements, and transforming them into integrated solutions and systems. Strong technical background in LLMs, RAG, AI Agents, APIs, Odoo, Meta APIs, databases, system integrations, and workflow automation.

Combines business understanding with end-to-end technical execution, from problem analysis and solution architecture to development, integration, deployment, and continuous improvement, with a focus on operational efficiency, process automation, and data-driven decision-making.

Professional Experience

AI Engineer | Data Scientist at Ocean Gate Line Company, UAE

Nov 2025 – Present

- Worked directly with Sales, Pricing, Marketing, E-commerce, Accounting, and Logistics stakeholders to understand day-to-day operations, identify bottlenecks and control gaps, and convert business needs into integrated automation, AI, data, and software solutions.
- Identified fragmented customer interactions across WhatsApp, Instagram, and Messenger; helped establish Odoo CRM as the central sales workspace by integrating these channels and extending workflows with business-specific features for structured lead handling and follow-up.
- Identified that freight-pricing requests sent from Sales to Pricing through WhatsApp could be missed, forgotten, incomplete, or difficult to track. Designed and implemented an Odoo Pricing Management module that centralized requests, statuses, filters, and contextual Sales–Pricing conversations inside each request.
- Identified the Pricing team's time-consuming email review process for freight rates received from GLA and vendors. Integrated relevant emails into each pricing request and implemented AI-based extraction of rates and key quotation details, giving Pricing specialists structured information directly in the workflow; also added vendor management and evaluation capabilities.
- Identified that Meta campaign performance based only on lead volume did not reveal lead quality. Connected ad-source data with Odoo CRM outcomes (Qualified, Won, Lost) to evaluate campaign quality through real sales progression and improve marketing attribution; this work contributed to a 10–15% reduction in underutilized advertising spend.
- Identified that Meta order metrics alone could overstate e-commerce performance because orders may be delivered or returned. Connected Meta advertising and e-commerce orders with logistics outcomes to evaluate profitability using actual fulfillment results rather than order creation alone.
- While gathering requirements from Accounting, discovered that logistics collections and settlements occur in both USD and IQD. Designed multi-currency financial workflows with separate cashboxes and transaction handling to keep balances and settlements clearly separated and traceable.
- Identified a settlement-control gap where drivers could return only part of the money linked to a collection/invoice. Designed driver debt tracking that links each outstanding balance to the specific unsettled transaction and alerts Accounting for follow-up.

- Contributed to a production logistics and fulfillment platform by designing PostgreSQL data relationships and building Python backend components, REST APIs, and integrations across customers, orders, shipments, drivers, collections, accounting, warehouses, and delivery operations.
- Addressed fragmented multi-year operational data by building ETL and reconciliation pipelines using Python, SQL, APIs, Apache Airflow, and Spark; cleaned and integrated three years of data and developed an ETA prediction model to support proactive shipment communication.
- Identified customer and operational workflows suitable for conversational AI and built LLM-powered applications using fine-tuned models, LangChain, RAG, embeddings, vector retrieval, and FastAPI, integrating AI with real business applications and operational data.

AI Engineer | ML | Data Scientist, Freelancer at SHAI FOR AI

Feb 2024 – Aug 2025

- Developed end-to-end machine learning and deep learning solutions from data preparation and feature engineering through model training, evaluation, optimization, deployment, and application integration.
- Built NLP and transformer-based solutions using Hugging Face Transformers, BERT, DistilBERT, PyTorch, and TensorFlow for classification, sentiment analysis, semantic search, and related NLP tasks.
- Fine-tuned transformer models using Hugging Face Trainer and Datasets and applied PEFT techniques including LoRA and QLoRA to adapt pretrained models efficiently.
- Exposed trained ML/AI models through FastAPI services and Dockerized applications to integrate model inference into real software workflows.

Tech skills

- **Programming:** Python, SQL, JavaScript, Java, C++
- **Business Systems & Automation:** Odoo CRM, Odoo Workflow Development, Meta/WhatsApp/Instagram/Messenger Integrations, Marketing Attribution, E-commerce & Fulfillment Integration
- **Data Science & Analysis:** Pandas, NumPy, EDA, Data Cleaning, Data Preprocessing, Feature Engineering, Data Validation, Statistical Analysis
- **Machine Learning & Deep Learning:** Scikit-learn, PyTorch, TensorFlow, Predictive Modeling, Classification, Regression, Clustering, Feature Engineering, Model Evaluation, Hyperparameter Tuning
- **LLMs, NLP & Fine-Tuning:** Hugging Face Transformers, BERT, DistilBERT, Parameter-Efficient Fine-Tuning (PEFT), LoRA, QLoRA, Hugging Face Trainer, Datasets, LangChain, RAG, Prompt Engineering, Embeddings, Semantic Search, Vector Retrieval
- **Data Engineering & Big Data:** ETL/ELT, Data Pipelines, Apache Spark, Apache Airflow, Hadoop, API-based Data Ingestion, Multi-source Data Integration, Data Migration, Data Reconciliation
- **MLOps & Deployment:** FastAPI, Docker, Kubernetes, MLflow, CI/CD, Model Deployment, Model Monitoring, API Development, AWS, Microsoft Azure
- **Cloud & Databases:** AWS EC2, AWS S3, PostgreSQL, MongoDB, MySQL
- **Visualization & Reporting:** Matplotlib, Seaborn, Plotly, Power BI, Dashboarding, KPI Reporting, Business Reporting

Education

Damascuse University Faculty of IT Engineer

10 / 2016 - 11 / 2022

- Bachelor's Information Technology Engineer with a specialization in Artificial Intelligence

Languages

- Arabic : Native
- English : Intermediate
